

Artificial Intelligence Final Project

SDG 4: Quality Education

Student Name: Mayuri Kadam

Course: Artificial Intelligence

1. Project Title

EduAI Assistant – AI Powered Learning Companion

2. Project Objective & Description

Objective

The objective of this project is to support students by providing personalized learning assistance through Artificial Intelligence. The system helps students understand concepts, generate quizzes, create study plans, and access educational resources.

Project Description

EduAI Assistant is an AI-powered educational platform designed to improve learning outcomes. The application acts as a virtual tutor that provides instant answers to academic questions and assists students in preparing for exams. The system aims to make education more accessible, interactive, and efficient.

3. Selected SDG and Reason for Selection

Selected SDG

SDG 4: Quality Education

What SDG 4 Focuses On

SDG 4 aims to ensure inclusive and equitable quality education and promote lifelong learning opportunities for all individuals.

Reason for Selection

Many students face difficulties in accessing personalized educational support. Traditional learning methods may not provide immediate assistance when students need help. An AI-powered educational assistant can bridge this gap by offering instant guidance and learning support.

4. Problem Statement

Problem

Students often struggle with understanding difficult topics and may not have access to tutors at all times.

Where Does This Problem Exist?

The problem exists in schools, colleges, remote areas, and online learning environments.

Who Is Affected?

- School students
- College students
- Distance learners
- Self-learners

Why Is It Serious?

Lack of academic support can reduce learning efficiency and negatively impact academic performance.

What Could Happen If It Is Not Solved?

Students may lose motivation, perform poorly in examinations, and face difficulties in skill development.

5. Proposed Solution

EduAI Assistant provides an AI-based learning environment where students can interact with a virtual tutor.

The system offers:

- AI-powered question answering
- Quiz generation
- Personalized study plans
- Educational resource recommendations

The solution helps students learn independently and receive support whenever required.

6. Project Features

1. AI Tutor

Students can ask academic questions and receive detailed explanations instantly.

2. Quiz Generator

The system automatically generates quizzes on selected topics to help students assess their knowledge.

3. Study Planner

Students can create personalized study schedules and track their progress.

4. Learning Resources

The application recommends educational materials such as articles, videos, and books.

5. Progress Tracking

Students can monitor their learning journey and identify areas for improvement.

7. Technologies Used

Technology	Purpose
Artificial Intelligence	Intelligent educational assistance
Generative AI	Content generation and responses
Python	Application development
GitHub	Source code management

8. Screenshots with Explanation

Screenshot 1 – Home Page

The home page introduces the EduAI Assistant platform and provides navigation to all major features.

Screenshot 2 – AI Tutor Page

The AI Tutor enables students to ask questions and receive detailed explanations.

Screenshot 3 – Quiz Generator Page

This page generates topic-based quizzes to improve understanding and knowledge retention.

Screenshot 4 – Study Plan Page

EduAI Assistant

Study Plan
Organize your study schedule.

Select Duration: 7 Days Generate Plan

Day	Topic	Time	Status
Day 1	Introduction to Biology	1.5 hrs	✓ Completed
Day 2	Photosynthesis	1.5 hrs	In Progress
Day 3	Cell Structure	1.5 hrs	Pending
Day 4	Human Digestive System	1.5 hrs	Pending
Day 5	Respiration in Plants	1.5 hrs	Pending
Day 6	Genetics Basics	1.5 hrs	Pending
Day 7	Revision & Practice	2 hrs	Pending

Students can create and manage personalized study schedules.

Screenshot 5 – Resources Page

The Resources section recommends educational content that supports learning objectives.

10. Future Scope

The project can be enhanced by:

- Voice-based interaction
 - Mobile application development
 - Multilingual support
 - Personalized analytics dashboard
 - Integration with online learning platforms
 - Advanced progress tracking
-

11. Conclusion

EduAI Assistant successfully demonstrates how Artificial Intelligence can contribute to SDG 4: Quality Education. The system provides personalized learning support through AI tutoring, quiz generation, study planning, and resource recommendations. This project highlights the potential of AI technologies in improving educational accessibility and enhancing student learning experiences.
